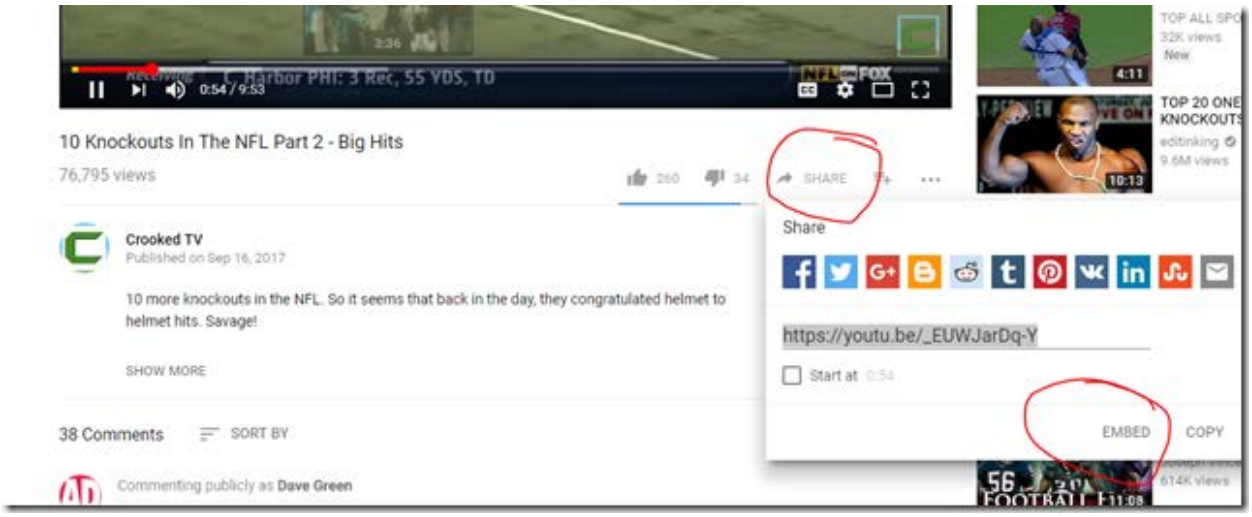
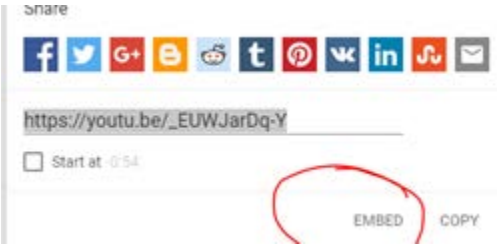
It's easy to add your uploaded YouTube videos to your CMS software. Whether you have your own YouTube channel or have just uploaded a video, follow the steps below to get your video uploaded to your website.

1. Your video must be uploaded at YouTube.

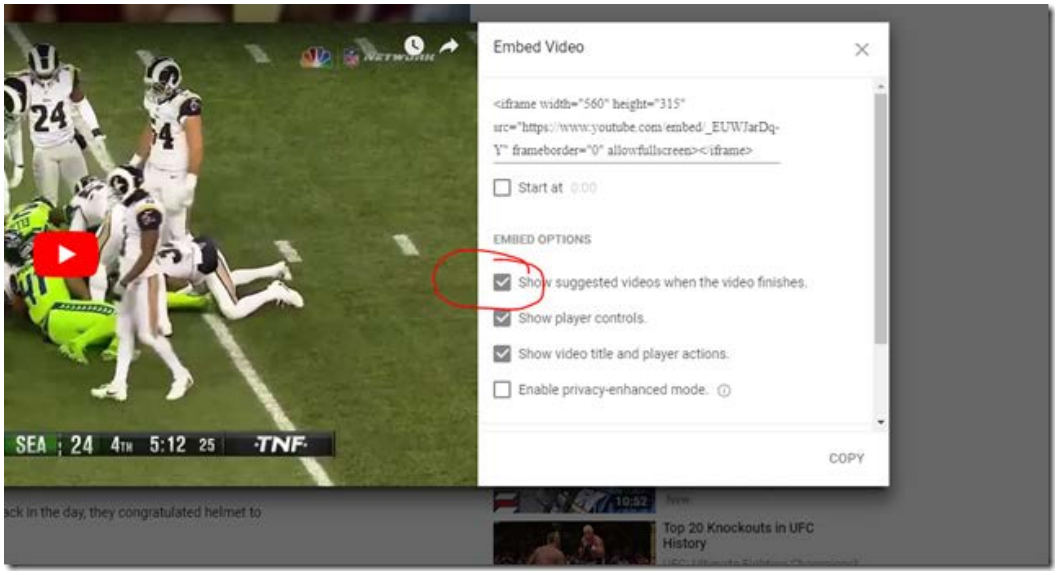
2. Visit the YouTube webpage of your video.
3. Below the title and photo click the Share button, the code you need will be displayed but first you must create the right code.



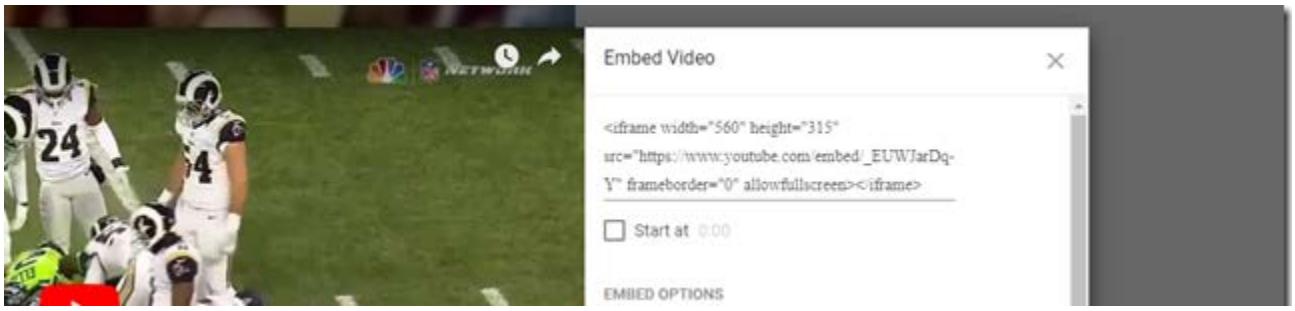
4. Click the Embed link to show the iframe code needed. The code in blue is what you will be working with.



5. Below the image of the home, UNCHECK the first button that says “show suggested videos” and check the next 2 buttons (show player controls and show video title and player actions) and UNCHECK enable privacy mode.



6. NOW the correct code is generated above the photo in the small rectangle that starts with iframe...



7 .Copy and paste that code into the back door of the CMS software under video embed code on the listing you have created.
